

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Wednesday 04/01/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Large areas of unstable windslab will continue to form on North-East to South-East aspects above 800 metres, becoming increasingly unstable as the temperature rises, here also, mainly above 1050 metres, dry accumulations of weakly bonded windslab will form and avalanches will occur. Unstable deposits will also be present in other locations sheltered from the Westerly winds. Below 800m areas of localised moderately bonded snow will be present. The avalanche hazard will be High

Forecast Weather Influences

Heavy snow will continue throughout the period with strong Westerly winds, The freezing level will slowly rise to around 1000m by late afternoon.

Comments

Another period of poor stability expected with fluctuating temperatures and heavy precipitation.
