

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Wednesday 04/01/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Accumulations of unstable windslab will be present on mainly Northerly through East to Southerly aspects above 700m where avalanches will occur. During the day, additional unstable windslab will be deposited on these aspects and will be destabilised further by rising temperatures. Many other slopes will be affected due to cross loading. Cornices will be unstable and prone to collapse. The avalanche hazard will be High.

Forecast Weather Influences

Strong North-Westerly then Westerly winds with snow down to 300 metres. Freezing level starting at 650 and rising to 1000 metres during the day. Heavy and prolonged snow showers will result in considerable drifting.

Comments

A very stormy day with poor visibility and gale force winds with significant drifting of new snow.
