

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 11/01/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

New localised accumulations of windslab will develop on North-through East to South-East aspects above 950 metres. In steep terrain surface instabilities will develop on these aspects during the temperature rise. Elsewhere the snowpack will remain well bonded and stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

The freezing level will lower to 900 metres overnight. During the early afternoon occasional snow showers will arrive on moderate to strong West to South-West winds. The freezing level will then rise to 1800 metres and snow will turn to rain.

Comments

Another freeze thaw cycle expected over next 24 hours.
