

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 13/01/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will remain firm and well stabilised in most locations. Small and localised accumulations of moderately bonded windslab, which have developed above 850 metres will persist around coire rims and on steep and very sheltered East to South aspects. The avalanche hazard will be Moderate.

Forecast Weather Influences

With persistent scattered snow showers dying out it will become dry and cooler overnight and during the day. Winds will be light North-West becoming Westerly. The freezing level will remain around 600 metres with a midday temperature forecast of minus 3 degrees Celsius on the summits.

Comments

Some cooler and hopefully more wintry conditions on the horizon
