

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 16/01/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will remain firm and icy in most locations, isolated pockets of windslab may exist in sheltered areas such as summit gully exits and North-West to North-East facing corrie headwalls above 900 metres. These accumulations will be mainly avoidable. The avalanche hazard will be Low.

Forecast Weather Influences

High pressure to the East will maintain the fine settled weather for much of Monday. It will remain cold and dry with fresh winds on the summits from the South-South-East.

Comments

Snow cover mainly limited to high corries. What exists is generally refrozen old wet snow giving a very icy and slick surface in many locations. Weather outlook looks favourable for much of Monday.
