

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 22/01/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Drifting of the recent snow will continue and form poorly bonded windslab on mainly North-East to South-East aspects above 800 metres where avalanches are likely. Localised poorly bonded accumulations will form in other isolated hollows and areas due to cross-loading. The avalanche hazard will be Considerable

Forecast Weather Influences

No precipitation is expected in the forecast period. Overnight the freezing level will be at 600 metres then 700 metres in the day. Winds strong North-Westerly.

Comments

Some high steep convex exit slopes are becoming weaker with the additional snow loading.
