

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 29/01/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Fresh snowfall, and redistribution of the softer surface layers of the existing snowpack by the strengthening wind, will deposit areas of poorly bonded windslab on North-West to North-East aspects above 800 metres. Stability will be better on other aspects. The avalanche hazard will be Considerable.

Forecast Weather Influences

Some light snow is expected overnight and through the day. Southerly winds will strengthen. The freezing level will remain around 600 metres.

Comments

Winds strengthening through Sunday.
