

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 31/01/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change is expected in the snowpack conditions. Some instabilities will exist in steeper location within the areas of windslab present on North to East aspects above 800 metres. The wind may also redeposit small and generally avoidable areas of windslab on West to North aspects. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will be another dry cold day with moderate winds from the South-East. The freezing level will be below 300 metres.

Comments

Cold wind at higher levels, but otherwise a nice mountain day. Similar conditions expected on Tuesday.
