

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 01/02/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Snow transport will continue and weakly stabilised windslab will become deeper and more extensive on steep West to North aspects above 900m where avalanches are likely. Localised accumulations of unstable snow may also be cross-loaded on to the tops and flanks of some North-East facing gullies. Good stability in all recently wind-scoured locations. The avalanche hazard will be Considerable

Forecast Weather Influences

Very little if any new snow is forecast. Winds will be strong, later moderate South-Easterly. It will remain very cold.

Comments

Popular ascent-descent route between Creag Meagaidh summit area and The Window likely to require special care in current snow conditions.
