

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Friday 10/02/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will generally improve on most aspects but instabilities remain at depth on North to East aspects above 950 metres where underlying weak layers will continue to destabilise in the warmer and moister conditions and here avalanches are likely. The avalanche hazard will be Considerable

Forecast Weather Influences

Overnight the winds will be light Southerly becoming light South- Westerly in the day. Freezing level will be above the summits.

Comments

Warmer with freezing level above summits
