

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 12/02/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will consolidate further on all aspects as the freezing level lowers to 900 metres, new snow amounts are not expected to be significant only a dusting. Localised instabilities will remain mainly on North-Westerly through North to Easterly aspects especially on steeper slopes below 900 metres, above this elevation the snowpack will be generally well bonded. The avalanche hazard will be Moderate.

Forecast Weather Influences

It should be mainly dry with light winds, there maybe the odd shower of drizzle or snow above 880 metres, the light winds will be variable in direction becoming Northerly . The freezing level is expected to fall to 900 metres.

Comments

Summit temperatures are forecast to be minus one degree C. Cornices may still be prone to collapse causing slopes below to avalanche.
