

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 23/02/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The wet snowpack will thaw at all levels. Snow will continue to slowly consolidate but instabilities will persist mostly on steeper slopes on North-East to South-East aspects above 850 metres. Remaining cornices, rock and ice fall will continue to provide a significant hazard. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will continue mild with strong winds from the South-West. There will be further rain at all levels.

Comments

Remaining cornices and ice are prone to collapse in the current thaw.
