

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 27/02/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will consolidate overnight in a very brief cold snap then milder weather and rain will lead to thaw conditions during the day. The snowpack will remain generally well bonded on most slopes however, on the steeper slopes some localised instabilities will remain. Areas particularly affected will be above 950 metres mainly on North to East aspects. Cornices will be prone to collapse. The avalanche hazard will be Low.

Forecast Weather Influences

Rain this evening followed by a dry period then rain during the day. The freezing level becoming 3000 metres with strong West-South- Westerly winds.

Comments

Wide spread cloud cover with rain for most of the day, the winds will rapidly increase in strength with altitude to give gales over the summits.
