

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 28/02/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Greatest accumulations are still on Easterly quadrant aspects above 850 metres where the remaining snowpack is well bonded and stable. Some lingering cornice hazard persists. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will remain well above the tops with moderate Westerly winds backing South-Westerly later. There is no precipitation forecast

Comments

Perhaps the new month will renew winter.
