

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 02/03/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing snowpack will firm up in the cooler temperatures and will be stable in all areas. Some new, moderately well bonded accumulations will form on North-West to North-Easterly aspects above 1000 metres, but accumulations are expected to be small and avoidable. The avalanche hazard will be Moderate

Forecast Weather Influences

Overnight the freezing level will be at 1200 metres rising to 1700 metres in the day. Precipitation will fall as very light snow initially but this will turn to rain and die out in the day. Winds will be moderate strength Southerly at first, strengthening later.

Comments

Colder and more wintry conditions expected from the weekend.
