

THE AVALANCHE HAZARD WILL BE CONSIDERABLE**Avalanche Hazard Forecast for Tuesday 06/03/2012****Avalanche Problems****Forecast Snow Stability & Avalanche Hazard**

Instabilities within the snowpack will develop in summit gullies and on slopes with a North through East to South-Easterly aspect mainly above 900 metres. Gully exits corrie headwalls and steep slopes where older snow underlies more recent deposits will be particularly affected. Cornices will become increasingly prone to collapse as mild conditions affect the area. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

Dry conditions overnight will be followed by occasional snow showers around midday. Moderate rain will affect the area later as the freezing level rises above the summits. Winds fresh North-West backing South-West and strengthening through the day.

Comments

Becoming milder and stormy on through Tuesday.
