

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 14/03/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The remaining snowpack will continue to slowly thaw at all levels and stability will generally be good. Some surface wet snow instabilities may be present on the steepest slopes. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level is expected to be at higher summit levels overnight, rising above during the day with a temperature inversion. Light drizzle is expected with moderate, then strengthening South-Westerly winds.

Comments

Rockfall remains a hazard in these thawing conditions.
