

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 22/04/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Moderately bonded snow will be present on all aspects above 950 metres. At higher levels there may be some deposition of soft windslab on mainly South to West aspects. Surface instabilities are expected, especially on steep slopes and where subject to the effects of the sun. The avalanche hazard will be Moderate.

Forecast Weather Influences

Snow showers above 800 metres are expected to die away overnight; returning during the day, especially mid-afternoon. Winds are expected to be light to moderate North-Easterly. The freezing level will be around 1100 metres.

Comments

Current snowpack conditions will generally remain the same for next week, with the possibility of increased hazard mid-week. Strong NE winds and snow showers above 600-800m (heavier and more prolonged mid-week). Next Avalanche forecast for Lochaber will be published Friday 27th April.
