

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 17/12/2012

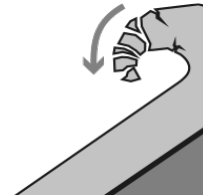

Avalanche Problems

Wind Slab

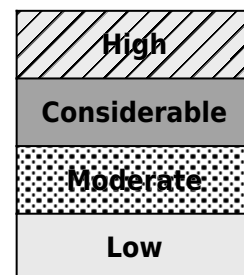

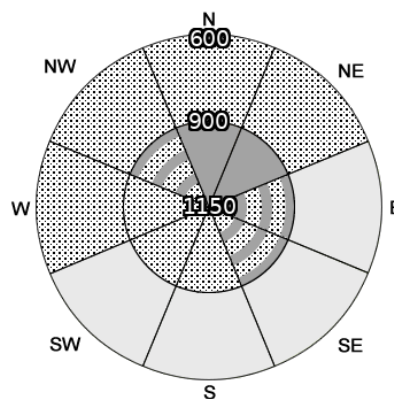

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Above 900 metres, areas of unstable windslab will mostly be found on North and North-East aspects but instabilities will persist on steeper terrain on most other aspects. Newly formed cornices will remain unstable. At lower altitudes the snowpack will be well bonded. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will be mostly dry but there will be a few snow showers with overnight Southerly winds backing Easterly during the day.

Comments

There have been some small avalanches at Lochnagar overnight. Starting zones from the scarp slope or cornices.
