

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 23/12/2012

Avalanche Problems

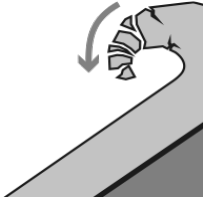

Wind Slab

Persistent Weak Layers

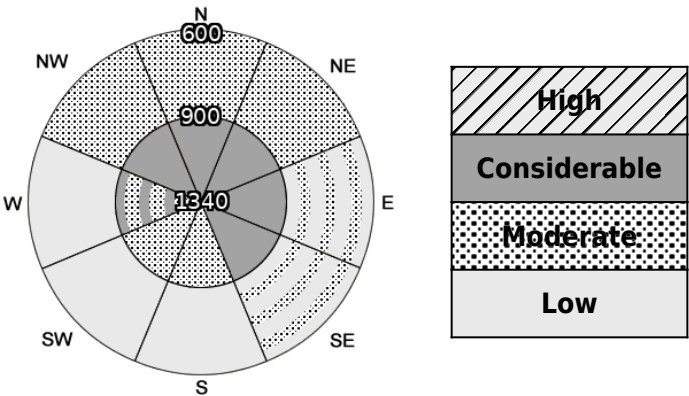

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

During the night and in the morning wet snow instabilities are expected on North-West to North-East aspects above 900 meters where avalanches are likely. Cornices will be prone to collapse. During the day these are expected to consolidate in the colder temperatures. However fresh snow instabilities will form on North-East to South-East aspects above 900 metres. The avalanche hazard will be Considerable.

Forecast Weather Influences

A mild night with rain at all levels is expected. During the day further rain will turn to snow above 900 meters as the freezing level drops to about 1000 meters. Strong South-Easterly winds will veer to between West and South-West.

Comments

Good snow cover and reasonable climbing conditions expected when the weather finally settles down.
