

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 26/12/2012

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Some new snow instabilities may occur where localised pockets of thin, soft windslab accumulate in sheltered lee areas above 850m. Although widespread any new snow is not expected to be accompanied by any significant drifting. Elsewhere the snowpack will be generally consolidated and stable. The avalanche hazard will be Moderate

Forecast Weather Influences

Freezing levels initially just below summits at 900m will lower to bring snow showers above 400m. Light variable winds will affect the area.

Comments

Quiet at Creag Meagaidh on Christmas Day.
