

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 29/12/2012

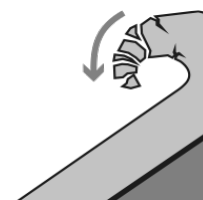

Avalanche Problems

Wind Slab

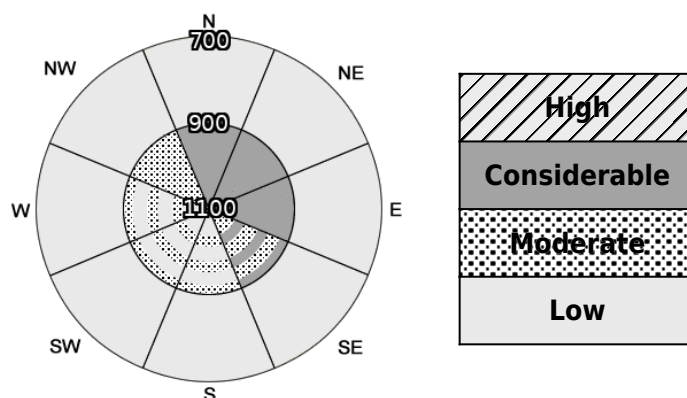

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Wet snow instability will persist overnight on slopes of most aspects above 900 metres and all cornices will continue to collapse. New layered and poorly bonded windslab will develop mainly on steep North to East aspects above 850m. Stability in all other locations will improve quickly in colder temperatures. The avalanche hazard will be Considerable.

Forecast Weather Influences

Persistent rain overnight will turn to snow showers as the freezing level falls. Winds will be strong South-Westerly, later West-South-West.

Comments

Wet, mild and windy on Friday. Snow showers due Saturday and may be heavier later in the day.
