

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 03/01/2013

Avalanche Problems

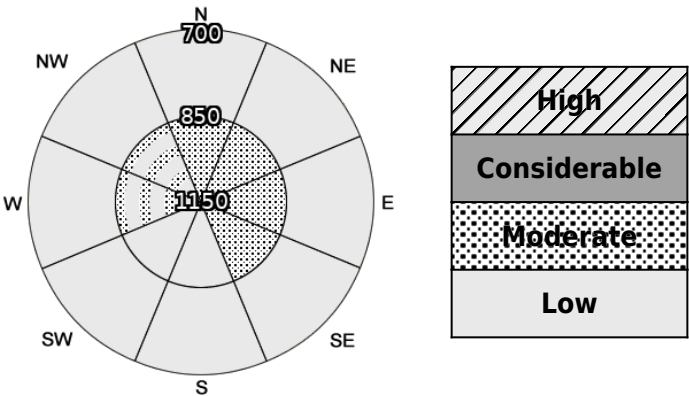

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Wet snow instabilities will remain in sheltered summit gullies and on steep slopes with a North through East to South-Easterly aspect mainly above 850 metres. Any remaining cornices will be prone to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will remain generally very mild with heavy rain continuing for much of the night and later in the day. Winds will be strong Westerly.

Comments

Mild and wet outlook with a brief interlude in the morning when it will be mild and dry. Freezing levels well above the summits. Additional hazard of rockfall exists.
