

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 05/01/2013

Avalanche Problems

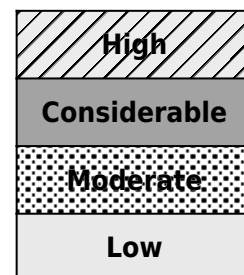

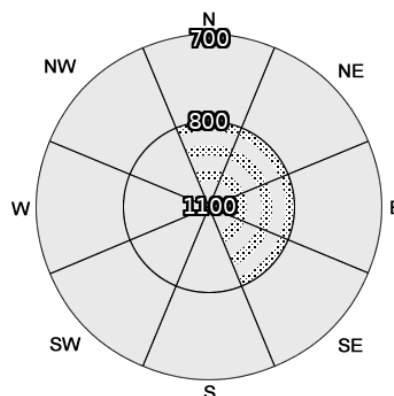

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The sustained thaw will bring little overall change to snow stability. The snowpack will remain well-bonded in most locations though pockets of wet snow instability will persist on very steep North through East to South-East aspects above 800 metres. There is some potential for minor full depth avalanches in a few selected locations. Remaining cornices will continue to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

Very mild and dry throughout. Winds will be moderate to strong South-Westerly, later Southerly.

Comments

Falling rocks a potential hazard in the sustained thaw. Waterfalls just visible at the bottom of principal Post Face gully routes.
