

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 08/01/2013

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Initially the soft wet snow will continue to thaw before starting to refreeze later in the day. It will remain generally well bonded on all aspects. The avalanche hazard will be Low.

Forecast Weather Influences

It will be a wet morning but by early afternoon it will become drier and cooler with the freezing level dropping to around 900 metres. The winds will be very strong from the South to South-West.

Comments

Snow cover is very broken and mostly restricted to Corries and high plateau areas.
