

### THE AVALANCHE HAZARD WILL BE MODERATE

#### Avalanche Hazard Forecast for Tuesday 08/01/2013

##### Avalanche Problems

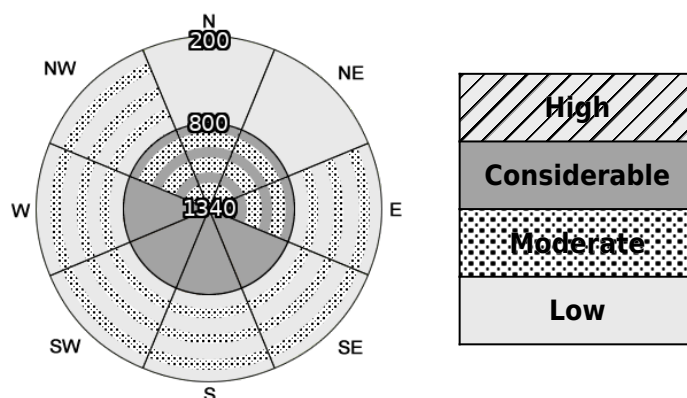

Wet Snow

Cornices

##### Forecast Snow Stability & Avalanche Hazard

Good stability in most locations though the potential for small full depth avalanches will persist on a few selected steep slopes. All remaining cornices will be wet and prone to collapse. Arrival of cooler, drier conditions will assist the stabilisation of the snowpack in all locations. The avalanche hazard will be Moderate

##### Forecast Weather Influences

Wet and mild until the onset of much cooler, drier weather later in the day. Winds will be moderate but become very strong South Westerly.

##### Comments

Rock fall an additional potential hazard during the sustained thaw. Cooler, drier conditions expected late Tuesday and into Wednesday.
