

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 19/01/2013

Avalanche Problems

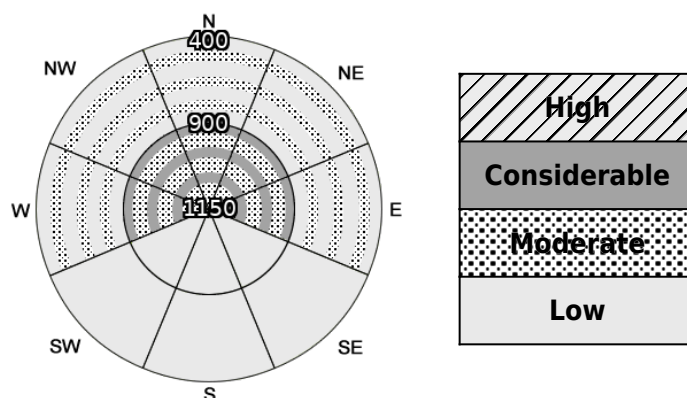

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Localised areas of poorly bonded hard windslab will remain in sheltered locations on West through North to East aspects above 900 metres. These deposits are mostly close to exposed ridges. Areas which have been exposed to the strong winds have been scoured, and stability is generally good. The avalanche hazard will be Considerable.

Forecast Weather Influences

After a few overnight snow showers, it is expected to be dry through the day. Strong South-Easterly winds will slowly ease. Temperatures will remain below freezing at all levels.

Comments

Although there does not look like much depth of snow in the hills of Glencoe, there are patches of hard unstable windslab to catch out the unwary.
