

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 20/01/2013

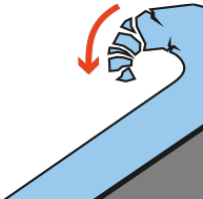

Avalanche Problems

Wind Slab

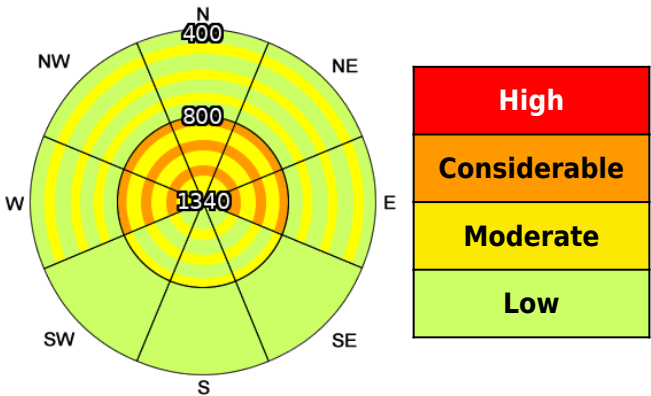

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Little change is expected. Areas of hard windslab will exist in sheltered locations on West through North to East aspects above 800 meters. In many instances these deposits will be poorly bonded due to the persistent weak under layer. However, many exposed locations have been scoured, and will hold little snow. The avalanche hazard will be Considerable.

Forecast Weather Influences

South-Easterly winds will ease through the period. Although a few light snow showers are possible, it will generally be dry. The freezing level will remain low.

Comments

Although the hills look quite bare, areas of windslab do exist.
