

**THE AVALANCHE HAZARD WILL BE HIGH**

**Avalanche Hazard Forecast for Monday 28/01/2013**

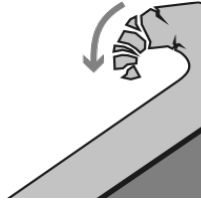

**Avalanche Problems**

Persistent Weak Layers

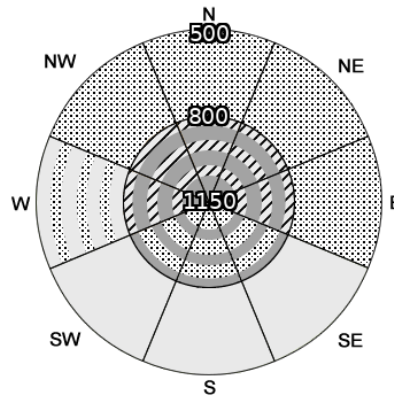

Wet Snow

Cornices

**Forecast Snow Stability & Avalanche Hazard**

Overnight, above 800 metres areas of unstable windslab will continue to develop in sheltered locations. These new accumulations and recent unstable deposits will be weakly bonded as rain saturates the snowpack and avalanches will occur. Areas particularly affected will be steep slopes, gullies and scarp slopes with a West through North to East aspect above 800 metres. Cornices will be prone to collapse. The avalanche hazard will be High.

**Forecast Weather Influences**

Overnight, snow showers above 500 metres with strong West-South-Westerly winds. During the day the freezing level will rise above the summits with heavy rain at all levels and strong Southerly winds.

**Comments**

Summit temperatures are expected to be plus 3 degrees with heavy rain affecting the area
