

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 28/01/2013

Avalanche Problems

Wind Slab

Persistent Weak Layers

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Accumulations of windslab will continue to develop and become more unstable during the onset of milder temperatures and rain. Avalanches are likely on steep Northerly through East to South-East aspects especially around corrie rims, crag aprons and in gullies above 950 metres. Cross loaded areas also unstable. Cornices will be prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers overnight on strong South-Westerly winds will become light and scattered during the morning. During the afternoon snow will turn to heavy sleet and rain as the freezing level rises from 500 to 1000 metres.

Comments

Instabilities most prominent during afternoon temperature rise and onset of rain.
