

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 29/01/2013

Avalanche Problems

Wind Slab

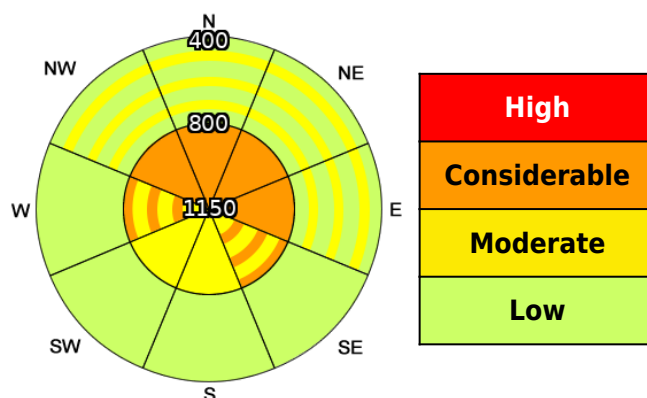

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Poor to weakly bonded windslab will continue to develop in sheltered locations mostly on North-West through North to Easterly aspects above 800 metres. Other aspects will also be affected due to cross loading. Avalanches are likely in these locations particularly on steeper slopes as the freezing level rises. Unstable cornices will continue to develop. The avalanche hazard will be Considerable.

Forecast Weather Influences

Overnight snow will turn to sleet during the day as the freezing level rises to around 1200 metres. Winds will remain strong from the West and later the South West.

Comments

A very poor day on the hill above 900 metres today. Another windy day forecast tomorrow with a rise in the freezing level to around 1200 metres.
