

THE AVALANCHE HAZARD WILL BE CONSIDERABLE**Avalanche Hazard Forecast for Friday 01/02/2013****Avalanche Problems****Wind Slab****Persistent Weak Layers****Cornices****Forecast Snow Stability & Avalanche Hazard**

Areas of unstable windslab will continue to develop in sheltered locations on many aspects, due to cross loading. The greatest accumulations will be on steep North through East to South-East aspects above 850m, gully exits, coire rims and scarp slopes especially affected. Wind scoured old exposed snow will be frozen and stable. New cornices, unstable. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

Variable winds at first, then mainly North-Easterly strengthening becoming North. Snow showers through the period with the freezing level around 500 metres.

Comments

Some new areas of windslab will be shallow and often localised but still weakly bonded. Icy, refrozen, wind scoured areas also exist. It should be drier in the afternoon.
