

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Tuesday 05/02/2013

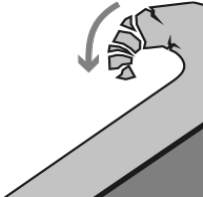

Avalanche Problems

Wind Slab

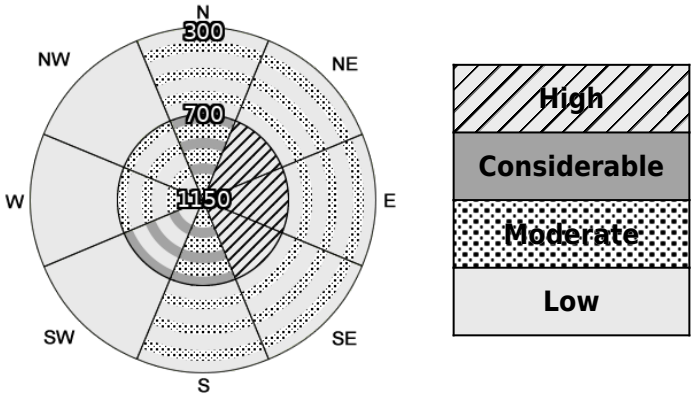

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Deep unstable windslab will exist initially on slopes with a North-East through East to Southerly aspect mainly above 700 metres where avalanches will occur. Through the day fresh windslab will form on more Southerly aspects above 800 metres. Windslab will also exist in sheltered gullies of other aspects due to cross loading and cornices will be prone to collapse. The avalanche hazard will be High.

Forecast Weather Influences

It will remain generally cold with heavy snow showers overnight and on during the day. Winds will be Westerly overnight veering Northerly through the course of the day.

Comments

Snow showers heavier overnight and strong winds will continue.
