

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Friday 15/02/2013

Avalanche Problems

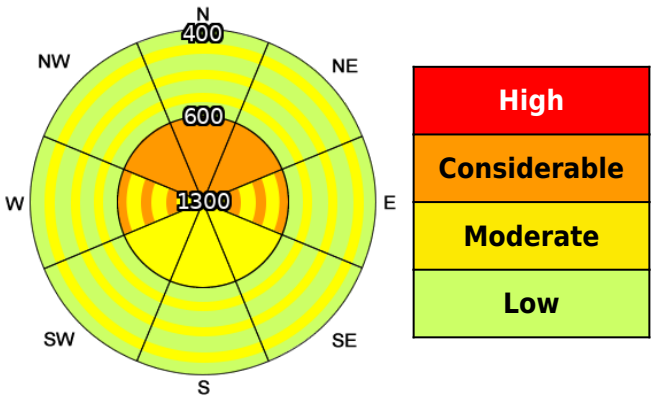

Persistent Weak Layers

Wet Snow

Forecast Snow Stability & Avalanche Hazard

Some new accumulations of windslab will form on mainly North-East to South-Easterly aspects above 1000 metres with gully exits and corrie rims being most affected. Weaknesses will remain at depth where the deep hard windslab overlies a weak layer of faceted grains on mainly West through North to Easterly aspects above 600 metres, with steep slopes and convex terrain being most affected. Other areas will be affected due to cross loading. The avalanche hazard will be Considerable

Forecast Weather Influences

Overnight, snow showers are expected with strong Westerly winds and a freezing level of 1100 metres. During the day isolated snow showers with a freezing level of 1000 metres and moderate Westerly winds.
