

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 24/02/2013

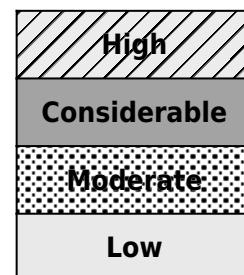

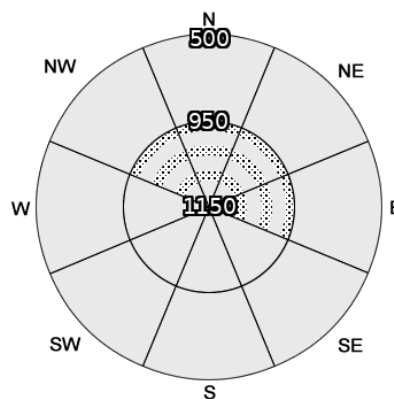

Avalanche Problems

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

The snowpack will be well frozen with some isolated areas of softer snow persisting in sheltered locations on mostly North-West through North to Easterly aspects above 950 metres. Any new snowfall will be insignificant. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will remain cold with a dusting of new snow. The winds will be light from the North-East then East.

Comments

Unstable faceted crystals are developing quickly in current conditions but stability is still good as in general the surface layers are well frozen and strong.
