

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 27/02/2013

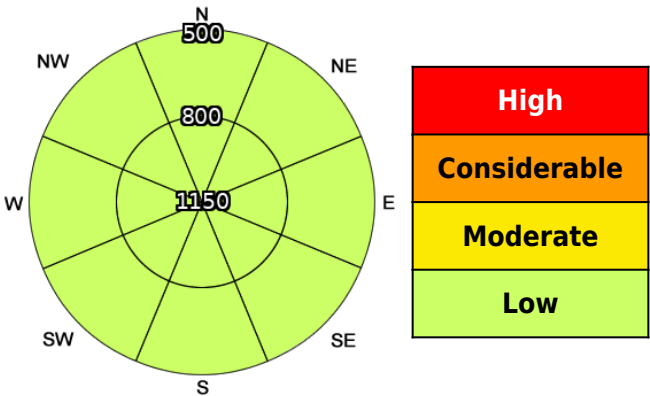

Avalanche Problems

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will remain firm and icy in many locations. The surface of slopes affected by solar warming will soften but general snowpack stability will remain good. Large cornices will become prone to collapse with rising daytime temperatures. The avalanche hazard will be Low.

Forecast Weather Influences

The very settled and dry conditions will continue with frosts overnight and milder through the day. Winds will remain light from a Southerly direction.

Comments

High pressure continues to dominate the weather giving fine settled and dry conditions. Widespread firm snow-ice exists on many slopes where serious run out potential onto rock and scree exists.
