

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Thursday 28/02/2013****Avalanche Problems****Persistent Weak Layers****Cornices****Forecast Snow Stability & Avalanche Hazard**

The snowpack will be well bonded and stable in most locations. Localised instabilities will be found on steeper slopes and on convex terrain features mostly on North-West through North to Easterly aspects above 950 metres. Thawing cornices will present a hazard. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

There will be some cloud pushing in from the North-West but it will remain dry. The freezing level will be around 900 metres overnight before lifting to above the summits. Moderate winds will ease and become light from the North-West during the day.

Comments

The weak front from the North not expected to bring any new precipitation.
