

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 12/03/2013

Avalanche Problems

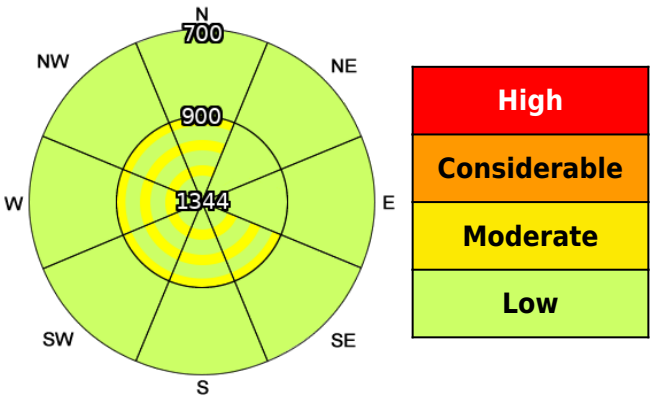

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

The old frozen snowpack will remain hard and icy at all levels, and will be stable throughout the area. Existing patches of windslab will persist mainly on South through West to North aspects above 900 metres. These will generally be shallow, but any accumulations with depth will be moderately bonded. During the day fresh windslab may develop on mainly South-East to South-West aspects. The avalanche hazard will be Moderate.

Forecast Weather Influences

It is expected to be dry overnight; there may be some light snow showers during the day. Winds are expected to be moderate Northerly. The freezing level will rise to around 500 metres during the day.

Comments

Remaining cold.
