

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 21/03/2013

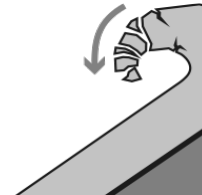

Avalanche Problems

Wind Slab

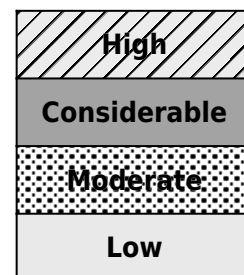

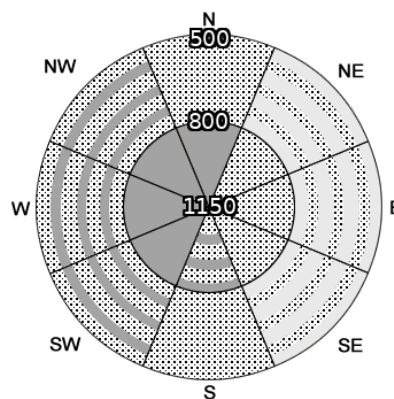

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will persist on some Southerly aspects but will be mostly found on South-Westerly through West to Northerly aspects above 800 metres. Below this altitude moderately bonded accumulations will be present, especially on steep terrain features. Areas exposed to the wind will be firm and stable. Newly formed cornices will require care. The avalanche hazard will be Considerable.

Forecast Weather Influences

There will be very little new snow but it will remain cold at all levels. The winds will become moderate from the South-West.

Comments

Some reasonable visibility at times today. There has been significant build up of windslab on some slopes at higher altitudes and care should be taken with route selection.
