

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 26/03/2013

Avalanche Problems

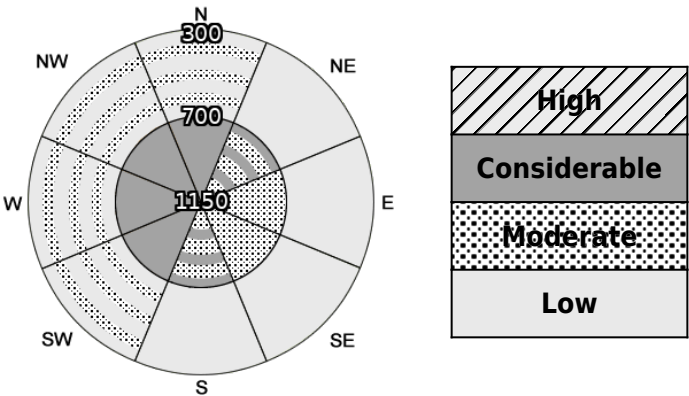

Wind Slab

Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will exist on slopes with a South-West through West to Northerly aspect mainly above 700 metres. Sheltered areas such as gullies and hollows of other aspects will also be affected with weak deposits due to cross loading. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will remain cold with fresh to strong Easterly winds and the odd light snow shower.

Comments

Cold conditions will continue, Weakness will continue to exist within deeper accumulations of windslab.
