

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 31/03/2013

Avalanche Problems

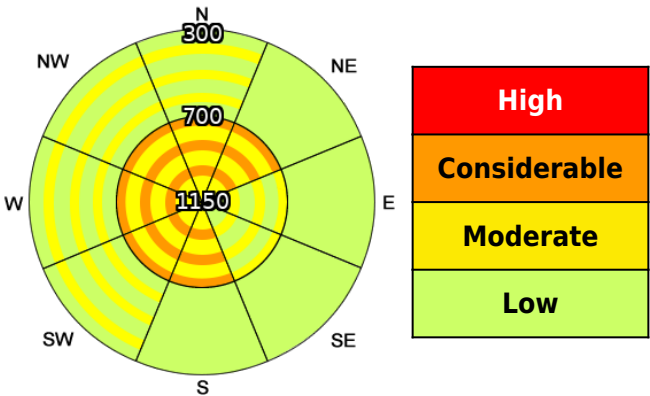

Persistent Weak Layers

New Snow

Forecast Snow Stability & Avalanche Hazard

The current complex and variable snowpack will remain. Areas of poorly or moderately bonded hard and soft windslab will be present mainly on South-West through West to Northerly aspects above 700 metres. Unstable deposits will also exist on other aspects. Persistent weak layers of sugar-like facets will be within the snowpack on many aspects. The avalanche hazard will be Considerable.

Forecast Weather Influences

It is expected to remain mainly dry and cold with the freezing level rising to 300 metres during the day. Winds will be light Southerly.

Comments

Cold settled conditions are expected to continue over Easter.
