

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 21/04/2013

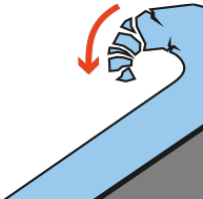

Avalanche Problems

Wind Slab

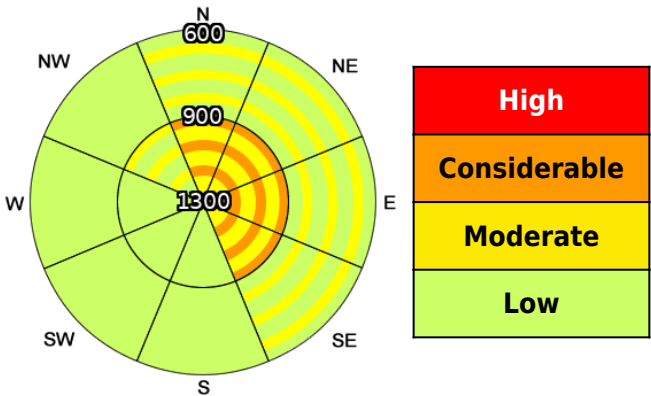

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

New accumulations of windslab will develop in sheltered locations above 900 metres. Primarily these will be in the tops of gullies and round corrie rims on North through East to South-East aspects but with other aspects being affected by cross loading. Soft new cornices will form. Slopes exposed to the wind will be generally stable. The avalanche hazard will be Considerable

Forecast Weather Influences

Overnight at higher elevations there will be moderate snowfall and very strong South-Westerly winds. Heavy snow early in the day will become showery later as the West-South-West winds decrease in strength.

Comments

Great ski touring conditions from Cairngorm car park. No walking required. Snow forecast with suggestion of yet more later in the week!
