

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 04/05/2013

Avalanche Problems

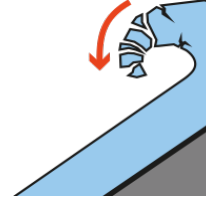

Wind Slab

Persistent Weak Layers

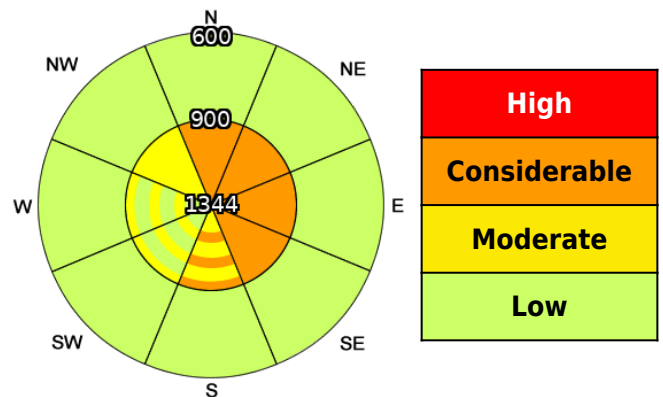

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Windslab will be present and develop, mainly on North through East to South aspects above 900 metres. Instabilities will increase in the snowpack especially on these aspects as the freezing level rises above the summits. Cornices will be unstable and prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

Light snow showers are expected overnight above 500 metres with moderate North-West winds. During the day snow will turn mainly to sleet, with snow on the highest summits, as the freezing level rises to around 1400 metres. Winds will be very strong South-Westerly.

Comments

Winter continued at higher levels today.
