

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 19/12/2013

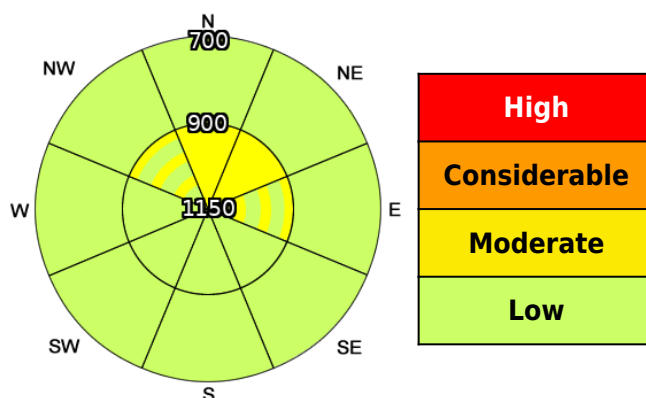

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Existing snow will become stable with new accumulations developing mostly on Northerly and North-Easterly aspects above 900 metres. Instabilities will exist particularly in deeper deposits on steeper slopes. Generally these areas will be avoidable. The avalanche hazard will be Moderate.

Forecast Weather Influences

There will be further rain overnight which will turn to snow as the freezing level drops. Winds will remain strong mostly from the South-West.

Comments

Freezing level above the tops today but due to drop down tomorrow again.
