

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Friday 20/12/2013

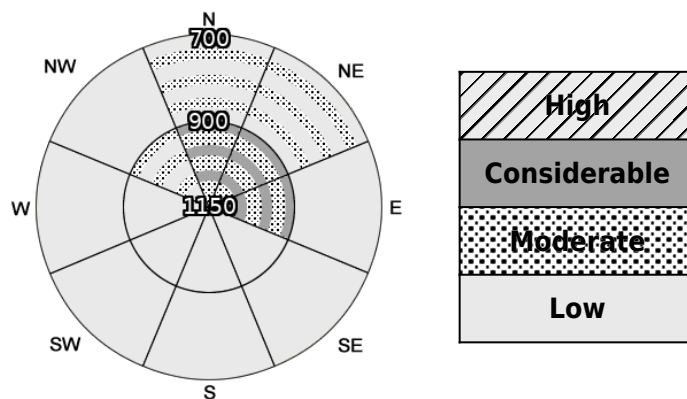

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will be found on mainly North to Easterly aspects above 900 metres. Windslab will be poor to weakly bonded particularly at the top of gullies and sheltered scarp slopes. Cross loading will affect other aspects. Slopes exposed to the winds remain stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

There will be snowfall throughout the period with strong South to South-Westerly winds.

Comments

Quite a change overnight. Deep accumulations in sheltered locations.
