

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Wednesday 25/12/2013

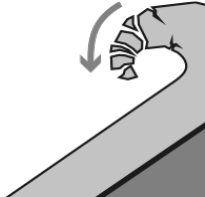

Avalanche Problems

Wind Slab

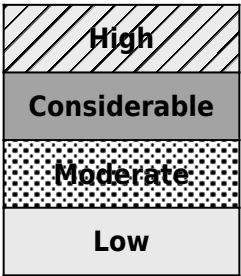

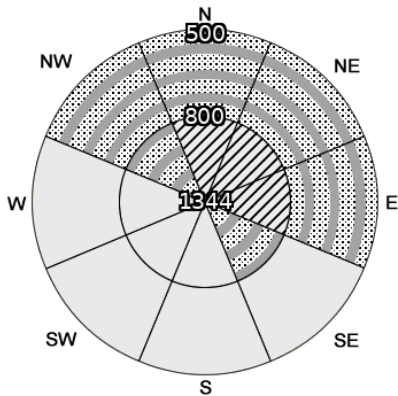

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Large areas of fresh unstable windslab will continue to form in areas sheltered from the strong South-West winds. Greatest accumulations will be on steep North, North-East and East aspects above 800m, notably in gullies, crag aprons and scarp slopes. Avalanches will occur in these locations. Slopes exposed to the strong winds will have less accumulations. The avalanche hazard will be High

Forecast Weather Influences

Showers will continue throughout falling as snow above 500m. Very strong South-West winds will persist.

Comments

Continuing blizzard conditions over the summits during Xmas day. Looking slightly less wild for Thursday
