

THE AVALANCHE HAZARD WILL BE CONSIDERABLE**Avalanche Hazard Forecast for Saturday 28/12/2013****Avalanche Problems****Wind Slab****Persistent Weak Layers****Cornices****Forecast Snow Stability & Avalanche Hazard**

Areas of weakly bonded windslab will be found mostly in sheltered locations on North-West through North to North-Easterly aspects above 900 metres. Other aspects will also be effected by cross loading. Greatest hazard will be found in gully exits and other steep scarp slopes. Stability of recently formed cornices remains suspect. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

The freezing level will lower to around 800 metres overnight. There will be light snowfall on fresh to strong West-South-Westerly winds.

Comments

A real mix of snow types and cover on the hills at the moment.
