

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 28/12/2013

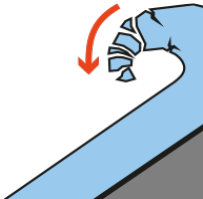

Avalanche Problems

Wind Slab

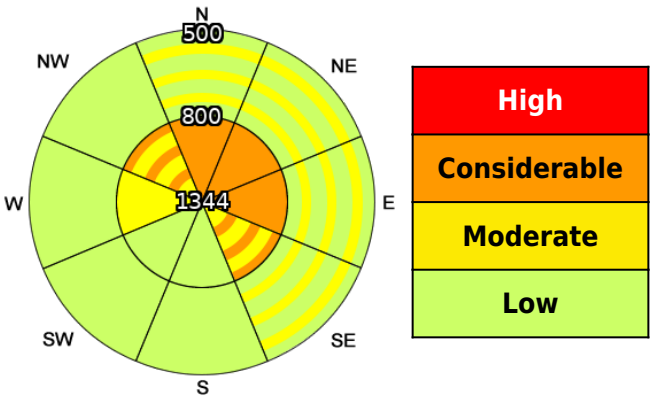

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Fresh accumulations of unstable windslab will be deposited in sheltered areas, mainly on North through East to South-East aspects above 800 metres, where avalanches are likely. Existing windslab will remain on West and North-West aspects at higher levels. Cornices will be unstable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Further precipitation is expected throughout the forecast period. This will fall as snow above 1000 metres overnight and above around 600 metres during day, as the freezing level drops to 800 metres. Winds will be strong West-South-Westerly.

Comments

The early winter continues to be distinctly snowy.
