

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 29/12/2013

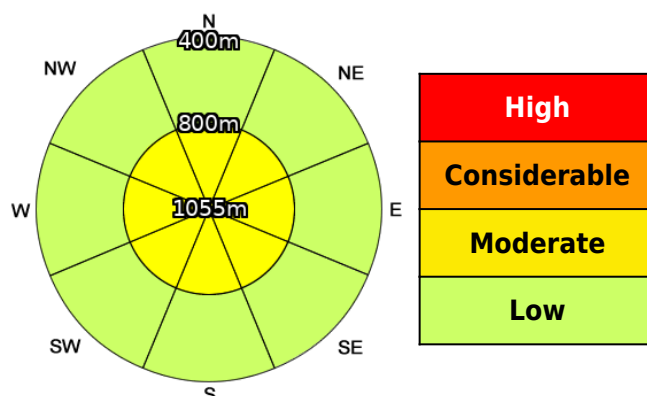

Avalanche Problems

Wet Snow

Forecast Snow Stability & Avalanche Hazard

Areas with deeper snow cover will be mainly well consolidated and stable. Some surface loose snow instability will persist on all very steep rocky ground. Some isolated pockets of wind slab will exist at high corrie rims above 800m on nearly all aspects dependent on exposure to cross loading. The avalanche hazard will be Moderate

Forecast Weather Influences

A ridge of high pressure will be briefly established through the forecast period. Winds will be highly variable in direction; West-North-West, backing through all quadrants to Southerly. There will be some snow showers above 600m, with rain below.

Comments

The next blog will be posted on the 31st Dec and the next full report for Torridon area will be published on 1 January.
