

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 04/01/2014

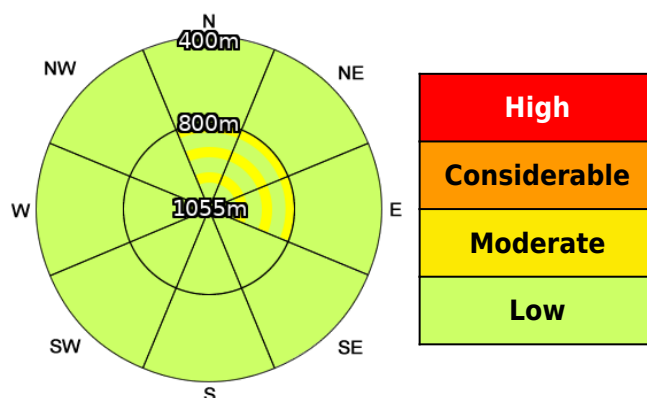

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The temperature range, with freezing level going above the tops followed by cooling, will contribute to further consolidation of the snowpack. Due to the prevailing wind being from the South-West some isolated pockets of only moderately bonded wind slab will persist on North-East quadrant aspects above 800m. The avalanche hazard will be Moderate.

Forecast Weather Influences

A series of wintry showers will end tonight and generally dry out on Saturday. Winds will be mainly from the South-West. The freezing level rise to above 1000m tonight but will cool again throughout tomorrow.

Comments

A brief glimpse of sun and a shadow but rather short lived.
